

Values for the Systems Engineering Department Faculty

We will be excellent teachers

- We will be focused on students, and demonstrate respect and caring for them.
- We will mentor and guide our students, and recognize their successes.
- We will provide quality instruction on and off campus.
- Our courses will be up-to-date, integrated, and coordinated.
- Our capstone student projects will be first the most educational for our students; all other project goals will be secondary.
- We will use appropriate technologies in our instruction.
- We will have a continuous improvement system for ourselves.

We will be excellent researchers

- We will all conduct relevant research in systems engineering and its associated disciplines.
- We will publish the work that we do: “If it isn’t written up, it never happened.”
- We will classify engineering consulting done for DoD clients as research if it is documented, and we will provide a departmental technical reports series as one vehicle for that documentation.
- We will foster a climate of collaboration among ourselves, seeking to reinforce each other’s strengths.

We will be excellent citizens of the department, campus and Navy

- We will be good stewards of resources, avoiding unnecessary duplication.
- We will be collegial among ourselves, our School, and the campus.
- We will perform our fair share of the campus committee work.
- We will be responsive to GSEAS, NPS, and Navy initiatives, and support them professionally.
- We will anticipate the needs of our customers, and be flexible and adaptive in meeting them.
- We will mentor our new faculty members.
- We will manage promotion and tenure processes openly, and set clear objectives.
